Debian (/ ' d e b i ə n /), also known as Debian GNU/Linux, is a Linux distribution composed of free and open-source software, developed by the community-supported Debian Project, which was established by Ian Murdock on August 16, 1993. The first version of Debian (0.01) was released on September 15, 1993, and its first stable version (1.1) was released on June 17, 1996.

Debian - Wikipedia

Ah, as you noticed already, seems the config file may be ignored. On Debian and derived systems like Ubuntu, check to see if there is a mongo file in /etc/default often you those files are also sourced during service startup. I don't have any servers myself that run a dedicated mongo server.

[SOLVED] getting connection refused in mongodb/remote ...

Debian supports the multi-user operating environment. Each user has a different set of permissions assigned by the system administrator. Linux can create new user accounts when they have done setting up a new system. In this article, how to add new users to Debian 10 using two different ways: the command line and through GUI are explained.
