The finite element method (FEM), or finite element analysis (FEA), is a computational technique used to obtain approximate solutions of boundary value problems in engineering. Boundary value problems are also called field problems. The field is the domain of interest and most often represents a physical structure.

Thanks all for the help!! And, I will keep in mind that there are three stages to FEA Analysis. I didn't realize that there are different programs for each step. So, LISA FEA only helps with one step, from what you are saying. I guess I will need to find another program for the model prep. Jo, Thanks for suggesting HyperWorks!

The extended finite element method (XFEM) is a numerical technique based on the generalized finite element method (GFEM) and the partition of unity method (PUM). It extends the classical finite element method by enriching the solution space for solutions to differential equations with discontinuous functions.
