Fill the pump with water and attach a vacuum gauge to the suction port. Remove the discharge hose and start the pump. Move the throttle to fast. The gauge should read at least 20 inch Hg. If the vacuum is low and the engine speed is correct, there is an internal problem with the pump (worn components, etc.).

Honda Pumps: Troubleshooting Tips

Re: Honda GX390 wont stay running Yeah, just went thru that with a GX340 engine on my pressure washer - the thing acted like a fuel problem. It would start and run OK at idle, but under load it would run maybe 15-20 seconds and die - if I was quick enough, choking it would SOMETIMES keep it from dying.
